Midterm project

Asthma Appointments.

Requirements

- Please design UI as shown below

- By default it should show Asthma only appointments for both Upcoming and Past visits

- It should show all appointments if all-types is clicked in the filter (asthma-only vs all-types)

- Appointment cells should be designed to be reused later

- asthma-only vs all-types filter should be designed to be reused later

- Use url to retrieve provider image

    - https://photo.nemours.org/P/(ProviderID)/100x100?type=P

- The App must be written in Swift.

- The App must make use of auto layout constraints.

Exercise work should demonstrate:

- Clean and readable code

- UI should adapt to both landscape and portrait mode

- Use of size classes

- Error free auto layout design

- Reusability component/code where it makes sense

- Use of swift 3 or above

- Exact match of colors or fonts not necessary

Expected output:
